

Tue, 15 May 2018 23:03:00 GMT rebar cage construction and pdf - Reinforcing bars in masonry construction have been used since at least the 15th century (2,500 meters of rebar was used in the Châteaux de Vincennes). During the 18th century, rebar was used to form the carcass of the Leaning Tower of Nevyansk in Russia, built on the orders of the industrialist Akinfiy Demidov. The cast iron [citation needed] used for the rebar was of high quality, and there is ... Crosshole sonic logging (CSL) is a method to verify the structural integrity of drilled shafts and other concrete piles.. The CSL method is considered to be more accurate than sonic echo testing in the determination of structural soundness of concrete within the drilled shaft inside of the rebar cage. This method provides little indication of concrete soundness outside the cage.
